(54) TMN AGENT GENERATION DEVICE AND METHOD THEREFOR

COPYRIGHT: (C)2000,JPO

(57) Abstract:

PROBLEM TO BE SOLVED: To provide a TMN(telecommunication management network) agent generation device and method capable of easily and highly reliably generating an agent without manual input.

SOLUTION: This TMN agent generation device 6 is provided with a data base 2000. In the database 2000, as specification information 7 for generating the agent 200 provided in a network element 20, parameter information shared among plural commands handled by the agent 200 and definition information peculiar to the respective plural commands are stored for the respective kinds and versions of the network element 20. The TMN agent generation device 6 copies the contents (specification information 7) of the database 2000 with the other network element and generates the agent from the specification information 7 which is stored in the database 2000.
